

Inventions and Innovations

Inspiring
Sailing
Then driving
Creating modern medicine
That can make sick people heal again
Creating light
Mastering flight
Real world problems
Become solvable
By a certain few
Who changed the world from the path which it was set
To a place where we can find anything on the internet
From a compass to a printing press
From the first phone to a smartphone
The world keeps changing
And innovation keeps amazing
People with its everlasting ranging
Of inventions and innovations
Created by people
Who made the world into their own craft table
And it may seem impossible, and that may be true
But if they can do it
You can too
So be the next Marie Curie or Thomas Edison
And maybe you'll travel to space
and show the world that even a place
we didn't think we'd ever see
could be just beyond our reach
Because everything that seems impossible
is just beyond our grasp
we just have to stand on our tippy-toes to reach it
and know how to make it last
