

## Women in the Past, Present, and Future

Past...

No woman has ever walked on the moon. Only 12 humans have walked on the moon. Only men.

Present...

Two female astronauts completed the first all-female spacewalk in 2019.

Future...

A woman will go to the moon.

Past...

Women did not earn the right to vote until 1920.

Present...

Kamala Harris is Vice President of the United States.

Future...

A woman will be President of the United States.

Past...

Amelia Earhart flew in a plane around the world but died.

Present...

Women are great at science, technology, engineering, and math (STEM) but there are still more men doing STEM professions than women.

Future...

A woman will invent a machine so people will have wings on their back and they will be able to fly.

I hope that women can do all those things. I want to be a scientist when I grow up. My mom is an engineer and she fixed my sister's yo-yo when it was broken.
